DETAILED ACTION

Response to Amendment

Amendments filed 06/03/2008 have been entered.

Allowable Subject Matter

Claims 1-14 are allowed.

The following is an examiner's statement of reasons for allowance:

With regards to independent claims 1 and 10, the prior art fails to teach a method comprising the steps of: performing a beam hardening compensation of scatter radiation data based on the acquired attenuation data and based on an energy shift of an equivalent object equivalent to the object of interest; wherein the scatter radiation data is based on scatter radiation scattered from the object of interest, when taken in combination with the other limitations of the claim.

Dependent claims 2-5, 11, and 14 are allowable by virtue of their dependency.

With regards to independent claims 6 and 9, the prior art fails to teach an apparatus comprising: wherein the apparatus performs a beam hardening compensation of the scatter radiation data based on the acquired attenuation data and based on an energy shift of an equivalent object equivalent to the object of interest; and wherein the second detector is arranged for acquiring scatter radiation data of the object of interest from scatter radiation scattered from the

object of interest, when taken in combination with the other limitations of the claim.

Dependent claims 7, 8, 12, and 13 are allowable by virtue of their dependency.

With regards to independent claim 9, the prior art fails to teach

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

Applicant's arguments, see pages 10-11, filed 06/03/2008, with respect to claims 1, 6, 9, and 10 have been fully considered and are persuasive. The rejection of claims 1, 6, 9, and 10 has been withdrawn.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following patents are cited to further show:

Arnold (US 6,320,931) shows beam hardening occurs with different size patients or absorbers, which leads to a shift in x-ray beam energy (Col. 10 Lines 46-60); a bone equivalent phantom – phantoms highly approximate the attenuation of the patient's bone and soft tissue such that shifts in beam

Art Unit: 2882

energy (Col. 11 Lines 15-30); and scatter radiation increases with both the x-ray beam and thickness of the body part (Col. 11 Line 60 - Col. 12 Line 7)

Arnold (US 5,335,260) shows a phantom imaged or scanned simultaneously with each patient, the variation in x-ray beam energy and beam hardening are corrected since the phantom and the patient both see the same x-ray beam spectrum (Col. 3 Lines 25-45); calibration phantom representative of human tissue (Abs.)
